Working for a more fertile earth
for over half a century

Fertilizers

Technology

DEDINI has its own projects for manufacturing equipment and complete factories for the fertilizer industry, using their own, exclusively, completely national technology. Constant improvement of its products guarantees that the industry1 requirements are perfectly met, both technically

Quality

Equipment manufacture complies with international rules and standards, under permanent control of specialized inspectors throughout the entire phase of execution in the workshops.

The raw and secondary materials used by DEDINI are submitted to strict quality control, and come from traditional production sources with a high technical concept.

Main Items of Equipment Supplied

- Drying, cooling, mixing and dusting, classification and granule bagging system;
